How Many Researchers in Each Nation?

According to the data from UN [1], Republic of Korea has the highest number of researchers per million, and the number reached 9081 in the year of 2021, followed by Sweden (8131), Finland (7871), Denmark (7708), and Norway (7228).

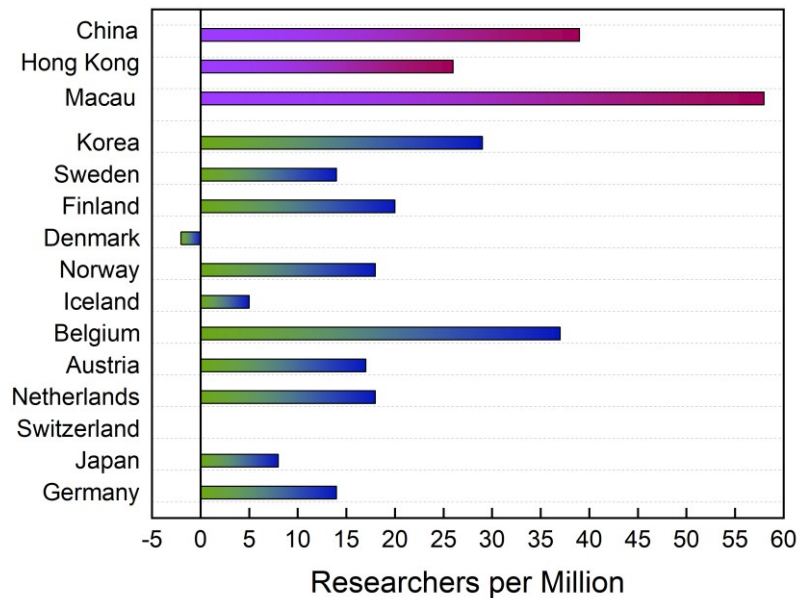

Researchers per Million Population (2021)

China has 1687 researchers per million population, one fifth of the number from Korea. This number (1687 per million) was smaller than those from Hong Kong (4586) and Macao (4132).

However, the number of researchers per million in China increased by 39% in the five-year time from 2016 to 2021, faster than the above-mentioned nations. At the meantime, the number of researchers per million increased by 58% in Macao, and increased by 37% in Belgium.

Researchers per Million increased from 2016 to 2021

Among the nations with top numbers of researchers per million, Denmark was the only nation whose number decreased (by 2%) in the same period
