Figure 7: Asymmetric Error Bars (*Red Arrows*)

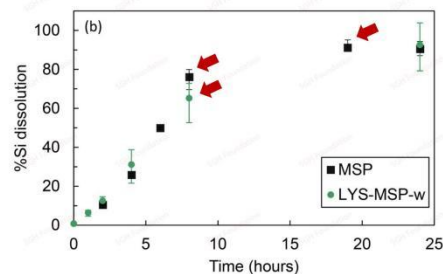

Figure 7. (a) SEM analysis of degraded LYS-MSP-w in simulated lung fluid with an initial dose of 30mg/L. Different time samples (0h, 1h, 4h, 24 and 72h) were analyzed at 2500, 25,000 and 50,000 x. (b) Dissolution kinetics of Si from LYS-MSP-w and MSP control (30mg/L) in SLF, presented as percentage of Si dissolved from the initial amount. Data are presented as the mean \pm SD ($n=3$).
