

Manipulated Spectra on 10.1039/c5ra25330f

Except for a small peak (red arrow), the noise of two Raman spectra (Figure 2) of the article [1] is identical.

10.1039/c5ra25330f, Manipulated Spectra

Fig. 2 Raman spectra of the C/C composite before and after nitric acid treatment (sample 1#), and after HAp deposition (sample 3#). The inset corresponds to the symmetric stretching mode (ν_2) of phosphate ion in HAp.
